

## Computer Repair Services in the Elizabethtown Area

At times a computer will become corrupted with viruses and/or spyware. The student technicians in the ITS Department will spend up to one hour diagnosing and repairing problems with a computer. In some instances they will determine that it is better to backup the data, wipe the computer clean and reinstall the operating system and the applications. These tasks can take several hours and are best accomplished by an IT professional with more time and experience than our student technicians. If the problem(s) can not be resolved by our student technicians within one hour, they will recommend that the client take the system to one of these local computer repair services.
